**ENERGY PRODUCTS OF IDAHO TO PROVIDE A RENEWABLE  
FUEL (EUCALYPTUS WOOD) FIRED ENERGY SYSTEM  
FOR AN 18 MWe POWER PLANT IN SICILY, ITALY**

**Coeur d'Alene, Idaho USA, November 2010 . . . Energy Products of Idaho (EPI)**, a leading provider of solid fuel fired renewable energy systems, has been selected to provide a renewable fuel energy system in Sicily, Italy. The system is designed to convert eucalyptus tree wastes into steam for an 18 MWe renewable energy application. The contract is the sixth renewable energy project for EPI in Italy. The contract includes an EPI fluidized bed boiler system that delivers steam to a steam turbine/generator for renewable energy production.

EPI's fluidized bed technology has been utilized to handle hundreds of renewable biomass fuels and many other traditional and non-traditional fuels, such as chipped tires and cattle manure. In this application, EPI's proprietary bed cleaning technology allows chipped eucalyptus wood to be utilized as a fuel in a clean and efficient manner.

EPI's fluidized bed technology offers excellent operating characteristics and superior emissions performance while providing a method of extracting usable energy out of a wide variety of fuels. The energy system for Sicily meets stringent air emissions requirements established by the European Union regulations.

EPI has been supplying fluidized bed energy systems for over thirty-eight years with nearly 100 installations worldwide. Specializing in converting difficult waste products into usable forms of energy, EPI is a leader in flexible fuel energy systems. EPI has twice received Power Magazine's prestigious "Power Plant of the Year" award for fluidized bed energy systems in the USA.

EPI is proud to offer our technology for this state-of-the-art facility in Sicily, Italy.
